

HELP STOP THE SPREAD OF INVASIVE SPECIES

Come clean. Leave clean.

Top 5 Ways to Help

Stay on designated trails, roads and routes, avoiding sensitive areas such as scablands and meadows. Minimize activities that disturb the ground and expose bare soil.

Clean clothing, footwear, waders, boats and other equipment of dirt, plants and bugs before and after visiting an area.

Avoid areas that appear to be infested with an invasive species. Look for "Noxious Weed" flagging or invasive species signage.

Remove plants, animals and mud from boats, paddleboards and other watercraft and drain motors, bilge and live-well before leaving water access. Let watercraft dry for 5 days or dry with towel.

Before camping, check for any firewood restrictions at your intended campsite. Locate a source of firewood near your campsite. Burn all of the wood or leave it with the campground host at the end of your trip.

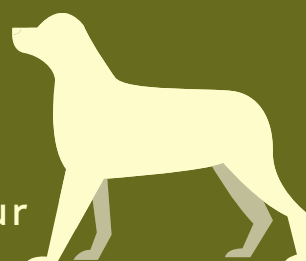

Horse Riding & Stock

- Feed animals weed-free feed before & during trip
- Inspect, brush & clean animals before & after visiting public lands
- Inspect & clean tack equipment

Hiking & Dog Walking

- Clean boots & paws between hikes
- Wear gaiters when hiking in weedy areas to reduce the risk of spreading weed seeds in your socks & shoes

Vehicles, Bikes, Boats & Trailers

- Thoroughly clean vehicles, bikes, OHVs and trailers prior to using public trails or moving to a new location
- Remove bugs, mud and plants when leaving an area

Camping

- If possible, place tent in area previously used and on durable surfaces
- Clean tents, tarps and RV mats before and after traveling to an area
